Rental Agreement: Soil Probe, Wheel Scales, Irrigation Uniformity Equipment

The renter shall borrow The Van Buren Conservation District's equipment at no cost. The renter agrees that if the equipment is not returned by the "Date Back", listed below, that the Conservation District will keep the deposit of \$100 to replace the equipment. Renter must leave a check or credit card information.

Upon the return of the equipment the deposit will be returned to the renter.

The soil probe is easily bent. Do not force the soil probe into an area that shows resistance. Ask the Conservation District for more instructions on taking soil samples.

The wheel scales are rated at 20,000lbs each. Weight exceeding that limit may damage scales. Scales need to operate on a smooth, flat, level surface such as a concrete pad, or if used in the field a sheet of plywood. Wheel scales were purchased for use with fertilizer and manure application equipment, not semi or box trucks. If your intended use for the scales are not for fertilizer or manure application equipment then you will need to check with the VBCD to ensure our scales will remain unharmed.

The irrigation uniformity equipment is office-made. The cups from the set will blow away if container is left without lid in wind or bed of moving truck. The poles for the uniformity set are made of fiberglass, they will flex to an extent, and then break and splinter. Splinters may cause harm to user. Ensure not to place cups and poles where a wheel track on a Center Pivot will make contact with equipment.
